

Illuminated Address Signs

The Illuminated Address Sign from Radical Electronics provides the end customer with an attractive, cost-effective address sign that is clearly visible in the dark. The sign can be seen from over 100 feet in the dark.

The sign is very easy to install . . . just place it in the window and plug it in! There are no batteries to install or wear out. First responders, after-dusk visitors and night-time delivery personnel will be able to find the address quickly and easily.

115 Hall Crescent
Saskatoon, Saskatchewan
Canada S7L 7G7

Features

- ♦ High visibility, visible at 100 feet or more.
- ♦ Low cost, less than \$3.00 per year to operate.
- ♦ Low maintenance, no batteries.
- ♦ Easy installation, just put in the window and plug it in.
- ♦ Automatic dusk to dawn controller.
- ♦ 2 year warranty.
- ♦ Indoor installation prevents vandalism and theft of the sign.
- ♦ Can be installed in unheated enclosures or sheds but should not be exposed to moisture.
- ♦ High reliability, over 200,000 hour life. (MIL HDBK 217F)

The Illuminated Address Signs not only provide the convenience of allowing visitors to find your address easily after dark, but it could shave critical minutes off the time that it takes first responders to find your home in the case of an emergency. This sign uses very little power. The sign uses less than 10% of the electricity of lighting a standard address number with a 100 watt porch light *and* it is fully automatic. It turns on at dusk and eliminates the need to turn it on in the evening.

The Illuminated Address Sign provides a worry free solution to the problem of address identification at night.

Resale Information

The signs are designed to be assembled with the specific number of the house at the time of sale. The numbers (from 0 to 9) are on individual circuit boards that slide into a frame with from 1 to 5 boards in the frame. The controller is then installed in the frame to provide power and control. The frame kits include the controller, frame, adapter and instructions. The numbers are sold separately and then installed in the frame either at the time of sale or the customer can install them.

The minimum stocking requirements are:

- ♦ Each of the different sizes of frame (there are 5 different frame sizes available).
- ♦ The numbers from 0 to 9 for each color.

Additional options for a wider variety:

- ♦ The numbers from 0 to 9 for other colors. There are 3 possible colors . . . red, green and amber. The letters from A to Z are available for all the colors.
- ♦ An *always on* version of the controller is available for signs that do not turn off. This would be useful for commercial displays or guidance signs.
- ♦ Longer frames with more digits are also available.
