

## Illuminated Address Sign Instructions

### **IMPORTANT:**

The illuminated address sign is designed for **INDOOR** use only. The unit can be exposed to temperature extremes but should not be exposed to rain.

### **Installation:**

Plug the output of the wall adapter into the connector on the back of the controller.

The illuminated address sign should be placed in a window that is visible from the street. The frame should be supported from the bottom by the window frame or some other stable object. The top of the frame can be attached to the window by either using adhesive tape or it can be held against the window by leaning some other object against it. The sign should be flush with the window to prevent the light sensor from picking up light from the room.

The illuminated address sign is intended to be used in conjunction with standard wall mounted address numbers since the lights are not as visible during the day.

If you are going to be mounting the address sign in some other way other than what is described here, see the web page for more information.

### **Cleaning:**

The outside of the unit may be cleaned with household window cleaner and a soft cloth.

Since the unit is not sealed, it is possible that insects and other debris may get inside the unit. To open the unit for cleaning:

- Disconnect power.
- Remove the frame trim at the controller end of the frame.
- Slide the controller and the boards out of the frame.
- Clean the frame and the boards. Do not use cleaner on the circuit boards.
- Slide the boards back into the frame.
- Put the frame trim back onto the frame
- Connect power and install the sign.

**Repair:**

The illuminated address signs are guaranteed against defects in material and workmanship for a period of 2 years from the date of purchase. To get your sign repaired send the unit along with a description of the problem to:

Radical Electronics Inc  
115 Hall Cres  
Saskatoon, SK S7L 7G7  
Canada
